State of Utah Paleontology Annual Report Cover Sheet

Permittee: _____

Permit Number: _____ Annual Report Year: _____

Please check each box below that applies:

- NO FIELD WORK WAS DONE UNDER THIS PERMIT IN THE PAST YEAR
(No further reporting is necessary)
- I REQUEST THAT THIS PERMIT BE RENEWED

(Include a copy of a current repository agreement with the designated curation facility. The Utah Museum of Natural History (UMNH) is the official repository for paleontological collections from state lands in Utah. If another repository is used, the permittee must also include a UMNH-ARA approving the designation of the alternative repository. Please note that the Utah Museum of Natural History is now also known as the Natural History Museum of Utah (NHMU), but for collection and repository purposes they will continue to use the UMNH acronym.)

1. Transfer of Collections to the Designated Repository

Have **all** paleontological resources collected under the authority of this permit, and their associated data (including field notes, maps, images, quarry logs, and computer indexes) been formally transferred to the designated receiving repository?

- YES NO

Please attach transmittal documentation, including a catalog of paleontological resources collected and assigned museum accession numbers. If some or all of the collections have not been transferred to the designated repository, please explain. This information is necessary so the State of Utah may inventory these collections in the future. If an alternative repository, other than the Natural History Museum of Utah (UMNH), has been approved for this permit, **an inventory of fossils collected must be forwarded to the UMNH Registrar by the end of each calendar year.**

2. Include the following information in your annual report:

- Summary of work completed, including field dates, personnel involved, and results.
- Copies of published papers and reports that acknowledge this permit.
- Narrative of future work that is intended to be performed under this permit.
- Notable discoveries, including new species discovered or described, and any media reports.
- Note any threatened resources about which the State of Utah should be aware.
- Paleontological Locality Forms for all new localities discovered, including maps and photos.
- Note any ways that UGS may be able to better assist with your work.
