</tbody>
</table>

1 Total coal resource with no economic, land use, or geologic constraints.

2 For Wasatch Plateau, Alton, Emery, Book Cliffs, and Henry Mountains; resources were constrained by a seam height minimum of four feet, with no more than 3000 feet of cover. For the remaining fields, resources were constrained by an estimated resource factor ranging from 30% to 40% of principal resources.

Source: Smith and Jahanbani, 1988; Quick and others, 2004; Bon and others, 2006, Quick and Tabet, 2015; production data from UGS coal company questionnaires and MSHA

Note: EIA reserve data will not match above data because they are from different sources. Estimated recoverable resources do not take into account economic or land use constraints.
